

Multi-Edit v9.10

This is a short feature list! - Please note that we cannot list all of Multi-Edit's attributes on one page. For a more detailed listing please refer to our Website: <http://www.multieditsoftware.com/v9-10info.htm>

TipWin Support for C, C++, CMac and Delphi

Multi-Edit's new Tool Tip windows display multi-line function definitions in easy to configure popups. These will highlight the current function parameter using customizable color schemes.

Function-Template Expansion for C, C++ and CMac

This feature automatically expands function parameters when typing the open parenthesis of the argument list. Argument expansion can also be easily configured.

Extensive Support for Fifty-one languages and Counting

Multi-Edit provides superior support for most of the programming languages in common use today, as well as some uncommon ones. Each Multi-Edit update adds new languages and their necessary support; ALSO, end users can easily add their own support for new languages! This provides the most effective editing environment for all our users' needs.

Support for PC, UNIX/Linux, and Macintosh Line Termination

Editing files from different environments, such as PC, UNIX/Linux and Macintosh, is now a simple task. Multi-Edit handles editing of PC, UNIX/Linux, and Macintosh files, even when they contain a variety of line ending characters within a single file.

Project and Session Managers

Customers can work the way THEY PREFER when dealing with related groups of files and other resources. Save your current editing state as a session, or entire build setups as projects.

External Program Integration

Multi-Edit integrates with virtually anything out there that runs on the target platform. This means Multi-Edit v9.10 can call any other program that is necessary for programming, development, accounting etc. Included with this feature are direct integration with several of the most common language compilers, IDEs (internal development editors) and VCS (version control systems) programs, plus code formatters/beautifiers. ME v9.10 can also check out files from multiple projects, not just the project currently being worked on.

File Comparison

Multi-Edit contains its own file-comparison utility, as well as having custom integration with the revolutionary Scooter Software's Beyond Compare. Please note it can also integrate within itself other comparison programs as well. If you like a particular program, Multi-Edit will work with that program.

Embedded Products

Evolve - a completely FREE copy of the Evolve Add-On is now embedded with every copy of Multi-Edit v9.10. ME v9.10 understands your **XBase**, **FoxPro** & **Clipper** programming needs; it watches you work and adjusts itself to your coding style, automating many tedious, time-consuming programming chores. It automatically expands and comments code, locates source files for you and manipulates database structures with the touch of a key.

PolyStyle - (recently renamed from Trita to PolyStyle) ME v9.10 now comes with a full and completely free copy of the award winning PolyStyle source-code beautifier, which learns your personal formatting style from your own formatted examples. You define the layout quickly and easily!

WebLair - Multi-Edit's own weblair reads and understands your code within your code! Never leave your editor again to review or code in the myriad languages that are now embedded within HTML files.

CMac - Multi-Edit's own C Style Macro Language

Multi-Edit has its own native macro language, with a simplified C-like syntax. What this means is that like the C programming language, customers can make Multi-Edit do anything that they want it to! They can add ANY FUNCTIONALITY, from quick hacks to major functional packages. Best of all, customers get the full system macro source code (unheard of in this industry) and the CMac language compiler for FREE!

Improved Telnet and FTP Capabilities

Customers who work with off-site resources (and most do take their work home with them) can now work with remote source-bases, debuggers, and compilers simply and easily. Multi-Edit's Telnet support has been redesigned to handle all latest modern developments in remote compiling.

Text Expansion is "On-the-fly" customizable with easily configured templates!

Multi-Edit's template expansion comes with extensive pre-defined templates. ME v9.10 now has a new preview pane for these customizations, which make it a trivial process to either modify or extend this feature. A user can either

- Modify the templates to what they are used to or
- Perfectly attune the templates to their preferences.

Multi-Edit's program architecture can be defined by our Users!

Users can add behaviors, modify behaviors, change the program interface, the keyboard key mappings (hot keys that call separate functions, like Ctrl-C to copy etc...) program menus, program dialog windows, whatever or however they like. AND users can add additional support and help features for the variety of languages and other programs out there.

Multi-Edit's DOES NOT CHARGE FOR Maintenance or Support

Customers will not need to purchase extended warranties or support contracts, necessary when purchasing our competitors products. MESI provides support and maintenance for our product for the life of the product. AND OUR SUPPORT IS PROVIDED BY THE DEVELOPERS AND PROGRAMMERS OF MULTI-EDIT! It is not off shore, and it is not some newbie off the street. Support comes directly from the men and women who built this product, and who use it daily.

Multi-Edit can search across files, folders and drives and with Perl 5 Regular Expressions

Multi-Edit already contains some of the best search/replace features in its class, and has now expanded our regular expression searches with Perl 5. Search for 5 letter words, extra spacing, you name it, you define it, nothing is impossible with Perl 5 regular expressions support.

Multi-Edit is constantly improving our Features to reflect our Customers needs and requirements!

Part of what makes Multi-Edit well loved among its customers is that we are constantly working to provide their requests and requirements. Multi-Edit began as the one editor that was built by developers for developers and continues to have that commitment for the programmer of today.

Block Operations (or highlighting text/characters)

Extensive block operations let you easily manipulate large sections of text. Work with streams of text, whole lines or columns. You can even perform math and complex fills on blocks of highlighted text.

Multi-Edit v9.10 Network Licensing

Multi-Edit is available as a Network License

Multi-Edit can be purchased as a single license, but is also available as a network node. Please note that installations for network licenses are only accessible when the individual user has access to the Network Server. This means the programmer or developer must have access to the network server to be able to run Multi-Edit from his/her workstation. A network license cannot be installed as a single user license!

Network Licenses can be custom quoted to fit the needs of corporations who have both onsite and offsite users of Multi-Edit.

Multi Edit Software, will honor the network pricing for the number of licenses purchased, even when they include separate single user licenses for a corporation who has techs working in the field as well as in the office.

What does this mean??? It means that a company who wishes to purchase a 100 user network node, but has 15 users who work offsite, will be provided an 85 user Network Node and 15 single user copies of Multi-Edit, ALL FOR THE COST of a 100+ tier Network License.

Network Licenses are available for testing as a FREE DEMO!

MESI will provide resellers and corporations a FREE EVALUATION version of a Network License Install. Any number of users can be requested for the network evaluation. And like all evaluation versions of Multi-Edit, all attributes of the program are accessible, with the exception of the Full Source Code which is only provided upon purchase.

A pricing Schedule for Network Licenses is provided below.
